

Attachments for Order Picker

Order Picker Attachments - Order preparation operation or likewise called order picking as it is more normally known is a process used within warehouse operations and comprises employees known as order pickers. The order picker's duty is to take and collect articles in particular quantities to be able to fulfill the customer's orders previous to shipment. Order picking is a simple warehousing method. The efficiency in which this task is accomplished can be directly related to the productivity of a supply chain. Therefore, order picking is among the most controlled logistic processes. Order picking falls within the category of the warehouse management system.

There are several specific types of order picking. The main types comprise: wave picking method, pick to box method, picker to part method or piece picking, zone picking method and sorting systems method.

The pick to box method comprises the order picker filling the box with the items from his or her station. The box then moves to other picking locations until the customer order is done. In this particular process, there is no movement of the order picker personnel. In the wave picking method, the order pickers move all-around to be able to collect the required things for several orders. The piece picking or picker to part method is similar where the order pickers or picker move in order to collect the items needed but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, products are brought to the order picker by an automatic system like for example a conveyor system or an automatic storage system. In the zone picking method, each and every order picker is assigned to one particular area. They are responsible for just realizing order picking in this particular area.
